SCALE FOR PROJECT SPRINGBOOT (/PROJECTS/SPRINGBOOT)

You should evaluate 2 students in this team

★

Git repository

git@vogsphere.kzn.21-school.ru:vogsphere/intra-uuid-28042   📋

Introduction

The methodology of School 21 makes sense only if
peer-to-peer assessments are done seriously.
This document will help you to do it properly.

- Please, stay courteous, polite, respectful and constructive in all
communications during this assessment. The bond of trust
between community 21 and you depends on it.

- Highlight possible malfunctions of the work done by the person
and take the time to discuss and debate it.

- Keep in mind that sometimes there can be differences
in interpretation of the tasks and the scope of features.
Please, stay open-minded to the vision of the other.

Guidelines

- Evaluate only the files that are on the GIT
repository of the student or group.

- Doublecheck that the GIT repository is the one
corresponding to the student
or the group as long as to the project.

- Meticulously check that nothing malicious has been used
to mislead you and have you assess something except
the content of the official repository.

- If you have not finished the project yet, it is compulsory
to read the entire subject before starting the review.

- Use the special flags in the scale to report an empty

or non-functional solution as long as a case of cheating.

In these cases, the assessment is completed

and the final grade is 0 (or in a case of cheating is -42).

However, except for a case of cheating, you are encouraged to continue

reviewing the project to identify the problems that caused the situation

in order to avoid them for the next assessment.

- You must stop giving points from the first wrong exercise

even if the following exercises are correct.

Preliminaries

Respect the rules

- The repository contains the work of the student (or group).
- The student is able to explain their work at any time during the assessment.
- The general rules are respected throughout the assessment.

⌀ Yes   ✕ No

Spring boot

Exercise 00 - Spring Security

- Does project structure match the standard Spring Boot structure?
- Is required role model fully implemented?
- Does each of the pages provide the required functionality?
- Are Spring Data Jpa repositories used?
- Are standard Spring Security components described in the task implemented?
- Have you implemented /signIn page yourself?
- Is remember-me functionality implemented?
- Have you ensured csrf attack protection?

⌀ Yes   ✕ No

Exercise 01 - Localization & Validation

- Have you prepared properties files for localization and validation?
- Is language change mechanism implemented in accordance with the task?
- Is a selected localization saved when you close and reopen the browser?
- Is data validation on /signUp page implemented in accordance with the task?
- Are javax.validation.constraints.* annotations used?

- Have you implemented your own password validator?

      ⊘ Yes   ✕ No

Exercise 02 - Mails

- Specify your own mailbox settings in properties file. Is confirmation functionality implemented in accordance with the task?
- Can an unverified user pass an authentication?
- Does an emailed link match the task's requirements?

      ⊘ Yes   ✕ No

Ratings

Don't forget to check the flag corresponding to the defense

✔ Ok   ★ Outstanding project

🗎 Empty work   🗎 Incomplete work   💀 Invalid compilation   🗗 Cheat   ☢ Crash

🚫 Forbidden function
